

# BIO-MANNA

**BIO-MANNA** is an organic manure produced through decomposition of selected biomass, in a scientific manner with naturally occurring beneficial bacteria for effective Nitrogen / Phosphorus fixing. Additionally, the product is enriched with readily accessible Micro & Macro Nutrients for the better Root & Shoot growth of the plant.

### Composition:

BIO-MANNA is in the form of concentrated Organic liquid combines readily accessible nutrients like N,P,K fortified with Nitrogen / Phosphorus fixing Bacteria and essential enzymes

- Improves Soil Fertility
- Beneficial in fruit production
- Acts as plant tonic
- Supports insect control

- Consists of bioactive humic and fulvic substances of selected biomass. It consists of cytokinins , auxins, betaines and gibberellins
- It consists of biologically derived N,P,K and trace elements which aid in better root and shoot growth and supplement the plant with essential nutrients at critical stages of crop growth
- Influence the phyto-nutritional quality of crops, enhancing the production of antioxidant metabolites in plants
