

Treatment of Blood-to-Blood Meal Fertilizer

OXYMAX – Oxygen-releasing formulation with ingredients to boost microbial activity, reduce pathogens, and stabilize nutrients.

| Components |
|--|
| Calcium Peroxide |
| Sodium Perborate |
| Coated Sodium Percarbonate |
| Potassium Mono Persulfate Triple Salt |
| EDTA |
| Titanium Di Oxide and Other Suitable Stabilizers |

PROCESS

HOW OUR TREATMENT WORKS

Eliminate flies and maggots that accumulates in the slaughter blood

Neutralizes unpleasant odours from the blood

Eliminates pathogenic organisms found in the slaughter blood

Improves the biological oxygen demand as needed by microbial blend during the decomposition process of the organic matter

Responsible for the decomposition activities of the blood and improves its properties as a usable fertilizer
